Viking Day

We had an amazing Viking day to round off our learning about this period of history. Amongst a range of activities: we chose a Viking name to write in runes; designed and made a shield; learnt about how the Vikings made a shield wall and tried this out in a battle re enactment and finally we orally retold our own Viking sagas in front of the fire.

Design & Technology - Heath Robinson Machines

This half term saw us research Heath Robinson style contraptions and combine this with our Science work on gears, levers and pulleys. We experimented with making drawbridges using pulleys and lever cranes, before designing our own contraption that would allow a marble to run through it. We evaluated our work at each stage and had great fun making the finished product!
