

Year 3 Summer 1 Website Photos

During Science this term, we learned all about Light. We looked at all different light sources, including natural and human made. We then Investigated which surfaces reflected Light, we discovered that shiny, smooth surfaces reflect light the best. After learning that light can only travel in straight lines, we started to look at why mirrors make good reflectors. Although we know that light is needed for life, we started to look at how light can be dangerous for our eyes, but we investigated lots of ways we can protect ourselves from the sun's damaging rays! Finally, we investigated how shadows are formed by creating our own in the playground and learned they are the absence of light!

Art

Throughout Summer 1 our Art topic was drawing in the style of Quentin Blake. We began by researching and learning about the famous illustrator - it was great to see so many characters from our favourite books. We then created some step-by-step drawings explained by Blake himself before designing and creating our own characters in the style of Quentin Blake for our final pieces- which were fantastic! We managed to include and experiment with various drawing techniques such as shading and different kinds of hatching such as cross-hatching to make shadows.
